

ZEBRAFISH FACTS

1. Zebrafish are tropical, freshwater fish.
2. They are native to the Ganges River in East India, and to nearby countries.
3. They will eat small living organisms like insects and zooplankton.
4. They are eaten by larger fish, birds, and amphibians.
5. They grow to about 1 – 2 inches long and live two to five years.
6. Most have black stripes and black eyes.
7. They are kept by hobbyists and used in laboratories to learn about living things.
